MY PROJECTS

A* visualization Feb, 2020

It's a visualization for a fastest pathfinding algorithm done by a binary heap. You can add walls to the grid and move points.

Learning Hub Jan, 2020

I created platform where i can make courses to help others learning and me at the same time. It tracks your progress to keep you motivated.

SocialMe Aug, 2019

It uses Facebook and Instagram API to fetch basic informations about your pages and it displays them as analytics.

Trader24 Jun, 2019

Application for trading US stocks in real time with virtual money with nice UI I made. You are able to open position, keep track of it and then sell. I recommend trying it out !

Bored Oct, 2019

My first big vanilla js project. In this application you can add other people to your friend list and organize meetings or parties with your friends.

Clouden Dec, 2018

My first bigger front-end project. It's basic cloud. You are able to send a file to server and then download it (dont look in code it's emberassing :D).

WHAT I KNOW

HTML

I built few simple and complex websites. I know semantics and BEM.

CSS

I know how to style website. Made better responsive websites by using flexbox layout.

JS

I often like to complete problems on HackerRank. I know of ES6 features and i built meeting application with vanilla JS.

Git

I make few hundred commits yearly so i know basic things like branches, pull requests or solving conflicts.

React

Used react router to prevent refreshing application for better experience. I know props, little bit of hooks, functional and class components, lifecycle, JSX, Refs and maybe more. Built few big apps.

Sass

I used it mostly with React. I know variables, how to structure files and syntax.

Redux

I used it twice, know what it's for. I know what is middleware. Used it to control side bars or popups.
