

Patryk Kozłowski

Front-end Developer

MY STORY

I started coding when i was 14 years old I was making C++ console applications back then. Two years later I started making games with Unity. That ended year later after 2 games made. When i was 18 i was partly working as graphic designer and started learning Front-end by doing projects about my intrests. In 2020 I got to know senior developer that I started doing project with. I was getting code reviews and I experienced how real development looks like. e.g. Jira, Slack, branch naming etc. I also got first commercial project where i got to know more about Stripe payment processing and serverless applications.

MY PROJECTS

Financial Modeling Prep Apr, 2020

My first big commercial project. I was responsible for whole app redesign, implementing firebase, user dashboard(e.g. buying stocks, user portfolio) and Stripe payment processing through firebase.

SocialMe Aug, 2019

It uses Facebook and Instagram API to fetch basic informations about your pages and it displays them as analytics.

A* visualization Feb, 2020

It's a visualization for a fastest pathfinding algorithm done by a binary heap. You can add walls to the grid and move points.

Trader24 Jun, 2019

Application for trading US stocks in real time with virtual money with nice UI I made. You are able to open position, keep track of it and then sell. I recommend trying it out !

Learning Hub Jan, 2020

I created platform where i can make courses to help others learning and me at the same time. It tracks your progress to keep you motivated.

Bored Oct, 2019

My first big vanilla js project. In this application you can add other people to your friend list and organize meetings or parties with your friends.

WHAT I KNOW

HTML

I built few simple and complex websites. I know semantics and BEM.

CSS

I know how to style website. Made better reponsive websites by using flexbox layout.

JS

I often like to complete problems on HackerRank. I know of ES6 features and i built meeting application with vanilla JS.

Git

I make few hundred commits yearly so i know basic things like branches, pull requests or solving conflicts.

React

Used react router to prevent refreshing application for better experience. I know props, little bit of hooks, functional and class components, lifecycle, JSX, Refs and maybe more. Built few big apps.

Sass

I used it mostly with React. I know variables, how to structure files and syntax.

Redux

I used it twice, know what it's for. I know what is middleware. Used it to control side bars or popups.
